

Iris dampers type IRIS

Galvanized steel IRIS air volume control damper of the diaphragm type with pressure measuring points
Available in range from Ø80 up to Ø800 mm

Application

- For air volume control and measurement in ventilation and air conditioning systems.
- The diaphragm valve ensures a perfect accordance between the diameter indication on the handle and the opening of the valve

Material

- Galvanized steel

Composition

- Body and valve made of galvanized sheet steel
- Plastic regulating nut with plastic key
- Measuring point on either side of the valve for connection of manometer
- Sticker with selection graph, mentioning the air volume at the different opening positions of the valve and the according pressure level
- Flexible joints for air tightness when placed inside the duct

Mounting

- To be mounted in between two ducts

Text for tender

- The air volume control dampers shall be of the circular diaphragm type, suitable for medium and high pressure systems. They shall be made of galvanized sheet steel
- ATC Type **IRIS**
